

Robin Doe

Data Engineer

Lisbon, Portugal | robin.doe@example.com | linkedin.com/in/example-robin-doe | github.com/example-robin-doe

Summary

Data engineer who owns a batch platform end to end — 14 production pipelines moving roughly 40 million rows a day into a retail analytics warehouse, from design through on-call. Reduced pipeline incidents from 31 to 4 a quarter by moving data quality checks upstream, and co-owned a cost effort that cut warehouse compute spend by 22%. dbt certified. Fully remote from Lisbon, full overlap with UK and EU hours.

Skills

Pipelines & Orchestration: Airflow (deployment ownership, DAG conventions, SLAs, alerting) · Python · Batch and micro-batch pipelines · Incremental and partitioned loads · Backfill tooling

Warehouse & Modelling: Snowflake · dbt · SQL · Dimensional modelling · Source-to-target mapping · Query profiling and cost optimization

Quality & Reliability: dbt tests · Freshness and volume anomaly detection · Great Expectations · On-call and incident response · PagerDuty · CI for data (GitHub Actions)

Platform: AWS · Terraform (maintenance) · Git · Kafka (consumer-side)

Experience

Data Engineer, Northwind Retail Group – Remote — Lisbon Mar 2024 – present
Data Platform team. Owns the batch platform behind retail analytics.

- Reduced pipeline incidents from **31 to 4 per quarter** by adding freshness and volume anomaly checks upstream of the transformation layer, so failures surface before they reach a dashboard.
- Co-owned a two-quarter cost-reduction effort that cut warehouse compute spend by **22%**, through warehouse right-sizing, query pruning and moving three unused daily jobs to weekly.
- Own **14 production pipelines** end to end — design, deployment, on-call and improvement — moving roughly **40 million rows a day** into the retail analytics warehouse.
- Added **180+ tests** to the transformation layer — uniqueness, referential integrity, accepted ranges and freshness — and made a failing test block the deployment rather than warn.
- Re-partitioned the largest fact table by event date rather than load date, cutting a full backfill rerun from **nine hours to forty minutes** and making reprocessing a routine operation rather than an overnight event.
- Contributed to a self-serve reporting initiative that removed roughly **900 hours a year** of manual reporting across the commercial teams.

Data Engineer, Contoso Logistics – Lisbon, Portugal Jan 2023 – Feb 2024

- Consolidated **11 source systems** into a single warehouse model, replacing per-team extracts that had drifted into four incompatible definitions of "order".
- Jointly delivered the analyst onboarding path — documented models, a query cookbook and a sandbox schema — cutting time to a first independent query from three weeks to four days.

Data Analyst, Contoso Logistics – Lisbon, Portugal Sept 2021 – Dec 2022

- Built the reporting layer for the operations team, then rebuilt it as modelled tables when the ad-hoc queries behind it became unmaintainable — the work that led to the move into data engineering.

Education

Universidade de Lisboa, BSc in Computer Science – Portugal Sept 2018 – July 2021

Certifications & Languages

Certifications: dbt Fundamentals (dbt Labs, 2023) · AWS Certified Cloud Practitioner (Amazon Web Services, 2022)

Languages: Portuguese — native · English — C1 · Spanish — B1
